

Service and solutions for the manufacturing industry

**EKONS** is a service provider for engineering solutions and CAD-applications. In our engineering department we work with the systems SolidWorks, I-DEAS, Unigraphics, ME10 and SolidDesigner. We realize the production with qualified partners. Our offered services include the product construction, the **construction of special machinery and automatization-systems**, finite elements calculation and structure-building, system **training, installation, maintenance and programming**.

Additionally we deliver complete-solutions for your automatization

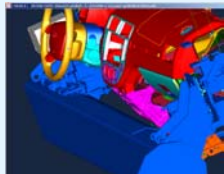

**Competent,  
reliable,  
professional**

With EKONS as a competent partner for construction und develop services you still remain flexible on the highest certified quality-level in case of order peaks and personal narrows.

We work for **automobile and mechanical-engineering-industry** companies in the whole range of **product-developing and production**. From the idea over the construction up to the planning of whole assembly lines for product-end-processing.

From the technical calculation over the production of prototypes up to the delivery of the system.

We create - primarily with the platforms I-DEAS / UG-NX and SolidWorks but also ME10 und SolidDesigner - solutions which guarantee a maximum on productivity by minimized costs. As of course individual synchronized on your demands.

**Partner for individual solutions**

EKONS is since 1999 an elder and competent partner in the matter of solutions for the efficient planning, developing and production of machine-forms und tools.

Furthermore CAD/CAM and CAE system-experts will stand by our costumers all the time.

With the shortest reaction times by troubleshooting, current updates or also by answering your special application-questions .

You receive additional support by software-schoolings and workshops in our schooling- and training-center in Hillscheid/Germany.
